TITLE : PHOTOPOLYMERIZABLE
 COMPOSITION

ABSTRACT : PROBLEM TO BE SOLVED: To provide a photopolymerizable composition capable of satisfying high sensitivity, excellent preservation stability and high printing resistance.

SOLUTION: The photopolymerizable composition contains a compound represented by the formula $(Q^1)_k \cdot R \cdot (Q^2)_m$ wherein Q^1 and Q^2 are each independently a group represented by formula (a) or (b); R is an n -valent hydrocarbon linking group; n equals $k+m$ and is an integer of 2-6; k is an integer of 0-6; and m is an integer of 0-6. In the formulae (a) and (b), Z is H, CH_3 or CHR^bX^1 ; X^1 and X^2 are each independently substituted oxy, substituted amino or substituted thio; R^1 and R^2 are each independently an aliphatic hydrocarbon linking group; and R^a and R^b are each independently H or a hydrocarbon group.
